Introduction

- SCALA - Standardisation du Code Á LA pour Java(script) Programmeurs

Disclaimer - This talk contains unsolicited advice on programming standards*. The author does not claim to have followed these all his life and shall not be held liable for any issues of whatever nature which may arise as a result of following these advices.

* Not Really!!

Useless Documentation

```
/**
 * Created by alex on 25/3/16.
 */
public class SomeNounDao.java {

    /**
     * Do something after this other thing
     *
     * @param randomObject Random Object
     * @param userId        User Id
     * @return Boolean
     */
    public Boolean doSomethingAfterThisOtherThing(
        RandomObject randomObject,
        String userId) {
    }
```

Better Programming Constructs

- Loops considered harmful
- Maps, ForEach, Times, Filters For a Better World
- No more arrayListS or arrays

A world without Nulls

Before

```
SomeObject k = a.getSomething();  
// Code continues for ever without another usage of a
```

After

```
SomeObject k;  
if (a != null) {  
    k = a.getSomething();  
}  
// Code continues for ever without another usage of a
```

Readable Tests

- Prerequisite - write tests

Over engineering

- Not everything needs to scale (Most things doesn't need to scale).
- Readability vs Scalability

Tech Debt

- Tech Debt is real(Based on true story)
- Less lines of code = Less number of lines which could be buggy
- Style checks
- If without an Else

Standardize Namings

- pid, whProductId, productId, reference
- Unique ids (Not very sure)

Functions Functions Functions

- There is a thing called function
- Number of exist points
- Pure functions
- Functions returns null

Buddha's Catch

- Don't make one which catches everything
- Exceptions face existential crisis - they should exist, they need purpose.

Clean Dao Classes

- Bug Free (Citation needed)
- Joins are like callbacks in javascript (I promise, but I don't insist)
- Return full Object instead of fields

Enum driven programming

- To remove magic numbers
- Clean data
- All special rules at one place
- Ability to find all usages

Unrelated rants

- Language specific to audience - We pay good rent for warehouse. It should be strong enough!
- Production Issue - Seriousness

Any more points?
